CHOHO

TIMING KIT

Engine Timing Researching and Manufacturing Excellence

QINGDAO CHOHO INDUSTRIAL CO., LTD

Qingdao Choho Industrial Co., Ltd. was founded in 1999. After 26 years of development, Choho has become a leader in chain system technology, a state recognized enterprise technology center, a national technology innovation demonstration enterprise, and the chairman unit of the Chain Drive Branch of the China Machinery General Components Industry Association.

With industry-leading R&D technology, product quality, and service levels, CHOHO Industry has accumulated a rich and high-quality customer base. By 2025, The vehicle chain systems have provided products and technical services to well-known vehicle manufacturers such as Honda, Suzuki, Yamaha,BMW, Honda R&D, Geely, BYD and SAIC. CHOHO's trademarks have been registered in over 120 countries, and its products are exported to regions including Europe, the Americas, Asia, and Africa, serving over 3,000 aftermarket customers.

Our chain system products cover over 80% of vehicle models globally, while individual chain products are compatible with more than 90% of vehicle models worldwide. We are the only domestic enterprise capable of forward and reverse chain system development and production for chains, guides, and sprockets. Additionally, we are the sole domestic manufacturer employing cold extrusion technology for pins and possess both dynamic and static simulation technologies.

CHOHO Production Base Distribution Map

Leadership in the Chinese OEM Market and the Global Aftermarket

10 Core Technologies

· Chain Strengh Preload Technology

This technology reduces initial chain elongation. It decreases chain elongation rate by 30% and enhances chain fatigue strength by over 80%.

· Pin CRV Treatment Technology

Applied to surface strengthening of pins, this technology improves chain wear resistance by more than 100%.

· Sprocket Technology

With cold extrusion process technology, tooth shape detection design technology, fine blanking to ensure the consistency of the sprocket, as well as dynamic testing capabilities.

· Guide Rail Technology

With full-process dynamic testing and design capabilities, product development and analysis capabilities including touch-flow analysis, finite element analysis, is the largest domestic production, R & D base of the guide rail.

· Plate Smoothly Punching Technology

Used for punching holes and edges of chain plates, it achieves 90% smoothness in holes and extends chain durability by over 50%.

· Chain Dynamic Testing Technology

The technology is mainly applied to the real-engine dynamic test of engine chain system, which can monitor the force and vibration of the chain system in real time.

· Variation Silent Design Technology

Customizes tooth profiles for specialized timing chain applications under extreme conditions.

· Bush Oil Hole Technology

Oil holes in sleeves enhance lubrication and cooling, improving chain wear resistance by over 100%.

· Tensioner Technology

Possess the technical capability of forward development of tensioner, complete DVP verification means and capability of tensioner development process, complete data collection and analysis capability of tensioner benchmarking development Possess the capability of multi-operating condition performance testing of dynamic characteristics of tensioner.

· Low-Frequency Fatigue Test Technology For Large-Size Chains (10-15 Hz)

Used for high-power marine engine transmission chains. Innovatively correlates low-frequency fatigue with chain component plastic deformation, guiding design and testing. First-of-its-kind globally, filling a technical gap.
